

Dr #	Module	Sub Module	Title	Description	Type	References (video and images)	Expected Result	Actual Result	Severity	Dev Remarks	QA Remarks
1	Sliders	Pages	Entire App	Sliders List container has fixed height with excessive negative space below pagination, creating unnecessary scrollbar	UI/UX		The container height should be dynamic—shrinking when there are no results and adjusting vertically as records increase without creating blank space.	A large blank space appears below the pagination area.	Low		
	Sliders	Slider list	Incorrect data mapping in Sliders List table—column displays order values (e.g., "order") instead of "order ID" instead of dates	In the Sliders List screen, the table grid displays incorrect data under the Date column header. Instead of displaying actual modification dates, the column shows sequential/ordering values (such as "Order 1", "Order 2").			The Date column should display valid date values.	The Date column displays order field (e.g., "order 1", "order 2") instead of actual dates.	Medium		
	Sliders	Entire App	Header toggle button is not vertically aligned with the Sliders List container grid	On the Sliders List screen, the Toggle button in the top header bar is misaligned with the main Sliders Container content below. The button, instead, is not aligned vertically with the header toggle bar and the main content only are offset, causing an inconsistent UI layout.			The Toggle button in the header should align properly with the margins and layout grid of the main content container.	The Toggle button and the Sliders Container content are misaligned vertically, missing the header lock icon.	Low		
	Sliders	Pages	Header divider heading and Sliders List section title display incorrectly	On the Sliders List screen, the top header title (breadcrumbs/heading) and the main content section title display incorrectly, missing the header lock icon.			The Section Title should clearly describe the specific view (e.g., "Sliders List" or "All Sliders").	Both the top header heading and the main section title display the exact same text.	Low		
	Sliders	Pages	Sliders List table, the ACTIONS column header is left-aligned while the action buttons are right-aligned, creating visual inconsistency	In the Sliders List table, the ACTIONS column header is left-aligned while the action buttons are right-aligned, creating visual inconsistency. Furthermore, the action buttons currently feature both an icon and text, which is inconsistent with the rest of the application's design, where icons are used for navigation and text is used for actions.			The ACTIONS column header and row content must be center-aligned.	The ACTIONS column header is left-aligned while the buttons are right-aligned.	Low		
	Sliders	Pages	Actions column is misaligned and uses bulky text buttons instead of compact action icons	On the Sliders List page, the search toolbar controls are overly grouped and aligned. The search input field sits on the far left, while the items-per-page dropdown (10/ page) and the Search button are positioned in the center-right section of the header toolbar. This creates unnecessary spacing and separates the Search button from its corresponding input field.			Replace text-based action buttons (such as "Items with country buttons") with icons. Use compact and clean text (such as "Items") with tooltips on hover to save space and streamline the UI.	The Search button and page size selector are floating near the middle of the container, separated from the search input field.	Low		
	Sliders	Pages	Search button and items-per-page dropdown are misaligned and misaligned from the search input field	On the Sliders List page, the search toolbar controls are overly grouped and aligned. The search input field sits on the far left, while the items-per-page dropdown (10/ page) and the Search button are positioned in the center-right section of the header toolbar. This creates unnecessary spacing and separates the Search button from its corresponding input field.			The Search button, and items-per-page dropdown must be grouped clearly together.	The Search button and items-per-page dropdown are floating near the middle of the container, separated from the search input field.	Low		
	Sliders	Pages	Create Slider form page, the form card/container is not centered on the screen, leaving too much empty space on the left and right sides, creating an unbalanced layout	On the Create Slider form page, the form card/container is not centered on the screen, leaving too much empty space on the left and right sides. The excessive negative (empty) space below the form is also present, causing the form container to be under-aligned and visually unbalanced.			The Create Slider form container should be center-aligned on the page.	The form is offset, creating a large empty gap on the left side.	Low		
	Sliders	Pages	Create Slider form is off-center with excessive empty space on the left and bottom	On the Create Slider form page, the form card/container is not centered on the screen, leaving too much empty space on the left and right sides. The excessive negative (empty) space below the form is also present, causing the form container to be under-aligned and visually unbalanced.			The extra bottom margin/padding after the form should be removed so the page height adjusts dynamically to the form size.	A large amount of unnecessary blank space exists below the end of the form.	Low		
	Sliders	Pages	App fails to show inline validation error messages when required fields when submitting an empty Create Slider form	When a user opens the Create Slider form and clicks the create button without entering any details (leaving mandatory fields empty), the application does not display any error messages (such as "This field is required") under the respective input fields.			Clear inline error messages (e.g., "This is required", "Please select the item") appear under each empty mandatory field when submitting an empty form.	No inline error messages are displayed under the empty required input fields.	Medium		
	Sliders	Pages	Right menu is missing a scrollbar when content exceeds screen height	The application's main navigation menu contains a large number of modules. However, no vertical scrollbar is provided for the menu.			The main navigation menu should feature a vertical scrollbar.	No scrollbar appears in the main navigation menu.	High		
	Sliders	Pages	Blog content does not switch to Urdu on the front end when language is changed	When an admin creates a blog and sets the blog title (Title (Arabic, English (Arabic), and Content (Arabic)), the front-end user application does not display the Urdu content when the language is changed to Urdu.			When the front-end language is changed to Urdu, the blog should display the Urdu content in the Urdu.	The blog content is displayed in English (or Urdu) but fails to switch the Urdu data when Urdu language is selected.	High		
	Sliders	Pages	Scheduled blogs are published immediately on the front end and ignoring the future time constraint	When an admin creates a blog and sets a future publish time, the system ignores the time restriction. The blog appears on the front-end application immediately instead of waiting until the scheduled date and time.			The blog should not appear on the front-end until the scheduled publish time is reached.	The blog appears on the front-end immediately at 11:30 AM, ignoring the scheduled time constraint.	High		
	Sliders	Pages	Future scheduled blogs publish immediately when the "Published" checkbox is checked	When an admin sets a future date and time for a blog and checks the "Published" checkbox, the system publishes the blog on the front-end immediately. The system should continue to ignore the "Published" checkbox, and the blog must only appear on the front-end when the scheduled future date and time are reached.			The blog should remain hidden on the front-end until the scheduled date and time are reached.	The blog appears on the front-end immediately, ignoring the future date and time constraint.	High		
	Sliders	Pages	Blog changed to "Draft" status remains visible on the front-end application	When a blog that is currently published on the front-end is updated to "Draft" status in the admin panel, it continues to show on the front-end application instead of being hidden immediately.			Draft content as a draft; this blog should immediately be removed/hidden from the front-end application.	The blog continues to display on the front-end application even though its status in the admin panel is "Draft".	High		
	Sliders	Pages	Form validation displays error message only on the Title field instead of all empty required fields	When an admin attempts to submit a creation or edit form without filling in required fields, the system only shows an validation message under the Title field (or the first field). The remaining empty required fields do not display any inline error messages to alert the user.			Inline validation error messages should appear under all empty required fields simultaneously.	An validation message appears only on the Title field, while other empty required fields show no error indicators.	High		
	Sliders	Pages	When an admin fills in the Title field but leaves other required fields empty, the Create/Update button becomes disabled or unclickable, which is inconsistent with the system design	When an admin fills in the Title field but leaves other required fields empty, the Create/Update button becomes disabled or unclickable, which is inconsistent with the system design. The system does not show any inline validation messages, error messages, or alerts to inform the user which fields are missing.			The system should display clear inline validation messages under all missing required fields so the user knows what needs to be fixed.	The Create/Update button gets disabled/hidden when submitting an empty form.	Medium		
	Sliders	Pages	When an admin creates or updates a blog on the admin panel, the blog is not published immediately on the front-end application	When an admin creates or updates a blog on the admin panel, the blog is not published immediately on the front-end application. There is a noticeable delay between the time the blog is created/updated in the admin panel and the time it appears on the front-end application (publishing) (or after a single page refresh).			Changes made in the Admin panel should appear immediately on the front-end application upon publishing (or after a single page refresh).	The updated content takes a long time to appear, and the front-end application does not validate multiple times before the new data becomes visible.	High		
	Sliders	Pages	Featured and Published checkboxes are displayed vertically instead of horizontally on the front-end application	On the Create Events form, the Featured and Published checkboxes are displayed in separate stacked rows instead of being placed side-by-side in the same horizontal row. This creates unnecessary vertical spacing and makes the overall layout less efficient.			The Featured and Published checkboxes should be positioned horizontally next to each other in the same row for a cleaner and compact UI layout.	The Featured and Published checkboxes are placed in separate vertical rows, taking up unnecessary screen space and affecting the visual presentation.	Low		
	Sliders	Pages	Although the front-end user Event Gallery displays explicitly states "Upload multiple photos for the event after the event is published", the file picker does not allow the admin to upload multiple images simultaneously	Although the front-end user Event Gallery explicitly states "Upload multiple photos for the event after the event is published", the file picker does not allow the admin to upload multiple images simultaneously. Only a single image can be selected at a time during event creation.			The file picker should allow selecting multiple images (one at a time or allow multiple file uploads), as indicated by the front-end description.	The file picker only allows selecting a single file at a time, ignoring multiple images from being uploaded for the gallery.	High		
	Sliders	Pages	No validation error message is displayed when saving an event without an End Date	When an admin creates or updates an event without selecting an End Date, the application fails to display any inline validation error message or toast notification to inform the user that the field is required.			The system should trigger a validation error message (e.g., "End Date is required") under the field or prevent form submission until a valid End Date is selected.	The validation error messages appear under the End Date field, leaving the user confused or why the form submission fails or proceeds with incomplete data entry.	Medium		
	Sliders	Pages	The "Featured" event functionality does not work as intended on the front-end application	The "Featured" event functionality does not work as intended on the front-end application. When an admin sets a future date and time for a blog and checks the "Published" checkbox, the system publishes the blog on the front-end immediately. The system should continue to ignore the "Published" checkbox, and the blog must only appear on the front-end when the scheduled future date and time are reached.			Featured events should always take priority and display at the top of the list of all events.	The non-featured event (Aug 12) appears at the top above the featured event (Aug 12), ignoring the system's sort order by date.	High		
	Sliders	Pages	When a user uploads only one image in the Daily Activity section, the image is not displayed on the front-end application	When a user uploads only one image in the Daily Activity section, the image is not displayed on the front-end application. The system should display the image, or at least the image upload request of displaying a clear error message.			Uploading a single image should maintain a neat, consistent layout grid without disrupting the alignment or spacing of adjacent image slots.	The overall UI alignment breaks, causing the image grid and surrounding boxes to look distorted and unaligned.	Medium		
	Sliders	Pages	On the Nearby forms listing page, the empty data message says "Try changing your search or add a new record" even when no search query has been entered	On the Nearby forms listing page, the empty data message says "Try changing your search or add a new record" even when no search query has been entered. This message is misleading and should be updated to reflect the actual state of the data.			If no data exists in database (Default Empty State) should show a generic message like "No records found. Click 'Add New' to create a record."	The system displays "Try changing your search or add a new record" even though the user hasn't performed a search yet.	Low		
	Sliders	Pages	When a user searches for a specific record, the search results are not displayed correctly	When a user searches for a specific record, the search results are not displayed correctly. The search results are not filtered correctly, and the results are not displayed in the expected format.			If user searched for something that doesn't exist (Search Empty State) Only show the "No records found matching your search." Try changing your search query.	The search results are not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	Create ready form	Update form field label from "Sex" to "Gender" on Nearby Forms	UI Issue		The field heading/label should be displayed as "Gender".	The field heading/label is currently displayed as "Sex".	Low		
	Sliders	Pages	On the Nearby Forms section, the selection dropdowns for Education, Employment, Health Status, and Disability are not displayed correctly	In the Nearby Forms section, the selection dropdowns for Education, Employment, Health Status, and Disability are not displayed correctly. The dropdowns are not filtered correctly, and the results are not displayed in the expected format.			The dropdown menus for Education, Status, Employment, Health Status, and Disability should only display relevant results for the user's current selection.	The dropdown menus display results of family members as well, allowing selection of non-primary individuals for fields meant only for the main person.	High		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		
	Sliders	Pages	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly	When an admin creates or updates a Nearby Case, the Case Category dropdown is not displayed correctly. The dropdown is not filtered correctly, and the results are not displayed in the expected format.			The Case Category dropdown should only display active categories.	The Case Category dropdown is not displayed correctly, and the results are not filtered correctly.	Low		

Front website	Needy cases	Card content (percentage, date, Raised/Pending details) is misaligned across Needy Case cards due to flexible text heights	In the Needy Cases grid view, the button content (Percentage, Raised/Pending details) is not aligned across the cards. The Location, and Needy Support text, When the card has longer text (e.g., 2-10 when a user date details), the bottom section pushes downwards, breaking the horizontal alignment across adjacent cards in the same row.		Fixed Card Layout: The bottom progress section (Percentage, date, Raised, and Pending details) must stay strictly pinned to the bottom of every card	Cards with longer text push the bottom progress section down. Cards with shorter text pull the bottom progress section up.	Low
Needy Case	Create Needy Case	Remove "Tertiary Date" field linked to Target Date" in Needy Case form	In the Create / Edit Needy Case form and details table, the field label currently displays "Tertiary Date". This causes confusion because the date represents the deadline by which the case is required to be resolved. To meet the user expectation or get automatically removed from the system, the label should be updated to "Target Date" to accurately reflect the button's function.		Rename the field label from "Tertiary Date" to "Target Date" on needy case form	The field label is updated to "Tertiary Date"	Low
Frontend website	Needy Cases	Remove "Monthly Support Period" date label and text from Needy Case grid layout	In the Needy Cases sub-grid view, each card currently displays a "Monthly Support Period" text line along with its start and end dates. This extra line of text adds unnecessary visual clutter and causes layout alignment issues across adjacent cards, particularly when the support period text and dates should be completely removed from the card grid layout.		The "Monthly Support Period" text and date range must be removed from the Needy Case cards.	The "Monthly Support Period (Start Date) – End Date" is removed inside the card container	Low
Needy form	Create and Edit	Misleading "Status" (Active/Inactive) field in Create and Edit Needy Form	Currently, the Needy Form (Create/Edit) lacks a Status toggle or dropdown field. Admins are frequently left to infer a needy case's status based on the "Inactive Reason" field from the form as the inactive records can be hidden or filtered out from needy cases without permanently deleting the data.		A Status dropdown or toggle field must be added to the Needy Form. Options: Active (Default selection) Inactive When Status = Active, the "Inactive Reason" field must remain hidden. When Status = Inactive, the "Inactive Reason" field must dynamically appear. Inactive Reason Dropdown with Common Options Fixed / Few Information Blocked Already Assisted / Case Resolved Involved Conflict / Duplicate Record Other	There is no Status dropdown or toggle button available in the form and the report data (grid/table/tables)	Medium
Needy form	Create and edit	Show required "Inactive Reason" field when Needy status is set to Inactive	When changing or setting a Needy record status to Inactive, the application should require the specific reason for inactivation (e.g., Fixed Case, Standard, Complete Record, etc.). To maintain data integrity, the "Inactive Reason" field should dynamically appear only when the Inactive status is selected, and it should be mandatory before saving.		Add an optional mandatory "Inactive Reason" field area when Needy status is Inactive	There is no option or field to record why a needy record has been set to Inactive	High
Frontend website	Needy case details	Position the "Deceased For" section directly below the "Target Date" on the front-end Needy Details page	On the public/frontend website's Needy Case Details page, the Deceased For tag is currently placed on the Front, Health, Education, etc., row after clicking on a details or an assessment section.		The Deceased For highlighting should be positioned directly under the Target Date field on the front-end Needy Details section.	The Deceased For categories are not placed under the Target Date field on the front-end needy details layout.	Low
Frontend website	Needy case details	Needy persons names and needy type not displayed on the front-end Needy Case details page	On the public front end website, when a donor opens a specific Needy Case Detail page, the actual name of the needy person and needy type are missing.		The Needy Person Name and needy type should be displayed directly on the Needy Case Detail page	The needy persons name is missing from the case detail view section	Medium
Frontend website	Needy case details	Remove/hide the "Monthly Support Period" date box from the public Needy Case details view	On the public website's Needy Case Details page, a "Monthly Support Period" box (showing dates from Thurs 11 Aug 2020 - Thurs 11 Aug 2021) is currently visible to general visitors and donors. This information is not strictly for internal administrative use.		This date range information should only remain visible in the Admin Panel for internal management.	The "Monthly Support Period" box containing internal support start and end dates is visible to public users	Low
Frontend website	Needy case details	Misleading "Donate Now" button on Needy Case cards in public grid view	In the public front end Needy Cases grid/view section, there is currently no direct action button on individual cards for donors.		A new, clearly "Donate Now" action button should be added to the bottom of every Needy Case card.	The Needy Case cards only display information (image, title, progress bar) without a direct "Donate Now" button on the card itself	Medium
Frontend website	Needy case details	Display "Required Amount" alongside Raised and Pending values on Needy Case details	In the public Needy Cases grid/view page, the cards currently show the progress percentages, Raised amount, and Pending amounts, but the Total Required Amount is missing.		The Required Amount should be displayed alongside Raised and Pending amounts in the card's progress section.	The card progress section only displays Raised and Pending amounts, omitting the required amount.	Medium
Verify need action app	Right menu	Make "Donation Requests" a sub-module under the "Donor / Member" parent menu in the Admin Sidebar	In the Admin Panel navigation bar (left-hand menu), the Donation Requests module is currently listed as an independent, top-level menu item.		Donation Requests should be converted into a sub-module (child menu item) under the primary: Donor / Member menu item	Donation Requests appears as a standalone, top-level menu item alongside other main modules.	Low
Needy form	Create and edit	Location dropdowns (Country, State, City) increase row height on selection, and "Inactive" checkbox needs to be removed from Needy Form	In the Create / Edit Needy Form, two distinct UI issues exist: 1. Selecting values from the Country, State, and City dropdowns causes the input field or row height to expand unexpectedly, breaking row alignment. 2. An unnecessary "Inactive" checkbox is currently present in the form, which should be removed.		Remove "Inactive" checkbox; the "Inactive" checkbox should be completely removed from the Needy Form.	Selecting location values increases the height of the dropdown fields and disturbs the row layout. The "Inactive" checkbox is displayed on the form.	Low
Frontend website	Header	Currency dropdown options remain in English when switching the front-end language to Urdu	When a user changes the front-end website language to Urdu, some currency options remain in English and do not change (on the top header bar) still display in English text.		When the language is set to Urdu, all currency options should display in Urdu script	Some currency options continue to show in English text instead of translating to Urdu script.	Low
